

enervive™

Pure and highly concentrated. Enervive™ is a premium fat made from the oils of freshly picked palm fruit. Enervive™ is high in Palmitic acid, the component of palm oil that promotes butterfat yields. Available in two concentrations- 90 or 95%.

Features

Color/ Aroma
White.
Neutral Odour.

Packaging
25 kg bags.
625 kg tote bags.

Typical Feed Rate
Lactating: 300 g to 600 g
Calf: 50 g

Bulk Density
470-480 kg/m³

Overview

Fat is included in dairy cow diets for its high energy density to provide the animal with the energy needed to regain body condition, support high levels of butterfat yield and maintain regular reproductive functions.

Product Description

Enervive™ is a premium fat produced from palm oil using the latest in fat processing technology. Based on long-chain, saturated free fatty acids, Enervive™ is in the form of micro-beads or fine flakes with no objectionable odor or taste. Palmitic Acid concentrations of 90 and 95% are available to meet various applications.
